Product Overview

Each ergonomic flooring product is uniquely designed for a totally flexible floor layout design. Below is a brief description of each available ergonomic flooring product and information regarding its construction.

Rejuvenator®

- Rejuvenator is the ultimate ergonomic floor in terms of comfort and construction.
- Large modular tiles interlock on all four sides to customize on-site virtually any flooring configuration.
- Interlocking ends and centers are also available to quickly and easily fabricate long runners.
- These runner components have built in borders that eliminate the need for separate edging and reduces costs and installation time.

Each Rejuvenator Tile has:

- Nine (9) male connectors on two adjacent sides.
- Nine (9) corresponding, hidden female connectors on the other two sides.

ErgoDeck®

- A comfortable, ergonomic floor that will withstand heavy use.
- Tiles can be unlocked and repositioned as work centers change to fit your needs.
- Optional 6" side safety ramps and corners are available.
- Solid and drainage designs offered in 3 comfort levels: Heavy Duty (heavy use) and General Purpose (for foot and light cart traffic) and Comfort (for optimum relief for foot traffic.) For optimum traction choose one of our 2 versions with No-Slip Cleats.

Each ErgoDeck Tile has:

- Six (6) female LockSafe connectors on two adjacent sides.
- Six (6) corresponding, hidden male connectors on the other two sides.

F.I.T.™ Functional Interlocking Tiles

- The most versatile 12" x 12" and 100% Silicone-free interlocking ergonomic flooring system in the market.
- Tiles snap together and configure to fit your workspace.
- The top surface and underside of F.I.T. tiles are designed to allow rapid drainage of fluids.
- F.I.T. tiles stay together very well making them ideal as a liner for mobile tool storage bins that require frequent removal for cleaning purposes.

Each F.I.T.™ Tile has:

- Four (4) female LockSafe connectors on two adjacent sides.
- Four (4) corresponding, hidden male connectors on the other two sides.

Area Preparation

Prepare the Floor

- This product is recommended for interior, mostly dry areas of heavy traffick and usage.
- It is recommended to sweep the surface of dust and debris before beginning.

Required Tools

- Utility knife or industrial shears
- Leather or Kevlar® gloves
- Measuring tape
- Straight edge

Optional Cutting Tools

- Skil® saw
- Band saw

Optional Supplies

- Super glue (for permanent installations)

RECOMMENDED:

Wear protective gloves when using a cutting tool or handling products with a grit surface. We recommend leather or Kevlar® gloves.

IMPORTANT: Wear leather or Kevlar® gloves when cutting and handling gritted products.

STEP 1.

- Plan the layout. When laying out the area, position the tiles so that the edges without the tabs are to the inside corner. This will make installation faster and easier.

STEP 2A.

- Lay the second tile over the first, placing the male side over the female interlocks. Using a rubber mallet, secure the tiles together. Repeat this process completing one row at a time. ErgoDeck can be assembled with bare hands, but we do not recommend this method as it increases installation time.
- When our LockSafe system is totally engaged, the tiles are accurately aligned without gaps creating a neat and clean installation.

STEP 2B.

- ErgoDeck is designed for easy, on site customization. The tiles can be cut every 3" and still connect. Although the tiles and ramps can be cut with an industrial shears, if you have multiple tiles to modify, we recommend the use of a band saw or a Skil® saw. These will also insure a straight cut.
- For best results, flip the tile upside down. Cut along lines as indicated in the photo. The line equally bisects the circular support.
- To modify tiles to fit around an object or other impediment, it is not necessary to flip the tile over. Simply measure and cut along the surface.

STEP 3.

- Attach safety ramps to the tiles. If you intend to add corner ramps, attach one corner and then add the other ramps from that point.
- Designed for simplicity, the ramps and corners will connect to either the male or female side of an ErgoDeck tile.
- To attach the female side of an ErgoDeck tile, simply cut these connectors off with a utility knife.
- To protect your hands when using a utility knife, always wear leather or Kevlar® gloves. These connectors can also be quickly removed using a Skil® saw.
- If a corner is used, the ramps bisect the tile connections for increased stability and support.
