1/32-inch x 1/16-inch x 1/32-inch U notched (FFA) – straight edge – pencil –utility knife with straight blades – thermo-hygrometer

100-lb. three section roller – Infrared thermometer – camera phone.

Inspection

If the wrong product or product with obvious defects or other damage has been shipped, do not install it. Contact info@greatmats.com immediately. Use product from the same batch only, in any area and randomly shuffle before installing.

Adhesive Application

First, ensure the area is clean (HEPA filtered vacuum). Measure out and mark your start lines, which must be followed before the application of the adhesive.

MI 1000 Adhesive: This adhesive must be used as a “Dry-to-the-touch” adhesive only. Apply using a 1/32 inch x 1/16 inch x 1/32 inch U-notched trowel (FFA). The adhesive must be applied at an angle of approximately 60° to the prepared substrate without voids or puddles. Do not make any sharp turns with the trowel to avoid an uneven application of the adhesive. Do not re-notch trowels; replace them as required.

Note: Do not apply adhesive to an area that cannot be installed within two hours.

Installation

Allow the adhesive to become “Dry-to-the-touch” and the matting must be installed within two (2) hours after it has become “Dry-to-the-touch”. Do not allow the adhesive to become contaminated with dust or debris or other contaminants; if it does, remove and apply fresh adhesive.

Carefully place the tiles into the adhesive bed following your start lines continuing until the area is completed including the perimeter cuts. After the area has been installed, immediately roll the entire area using a three section 100 lb. roller.

Clean up all debris, take photographs and if required, protect the flooring from traffic and have the end user or representative sign a “Job Completion Ticket”.
